

Rotax TaG Jet Kit Update 12/2008

GFK is supplying new TaG kits with the DP266 atomizer rather than the original DQ266. The difference in the DP266 is the nozzle portion of the atomizer is approximately 1mm shorter than the DQ266 atomizer nozzle.

This change allows the atomizer tip to align with the venturi nozzle in the same position as the original FN tip.

Note:
Teflon sealer tape can be applied to atomizer threads if leakage at nozzle joint is suspected.

Not required if joint is snug.
